DETAILED ACTION

Claim Objections

1. Claims 4-11 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-11 have not been further treated on the merits.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Danieli (USPN 4873965).

4. Referring to claims 1 and 2, Danieli teaches all of the limitations of these claims except for the pulling and pushing elements being lockably received in a fixing device. Danieli does teach an endoscopic device including a holding portion; a ring-shaped shaft that is configured as a leaf spring; and multiple pushing/pulling elements that are substantially rigid in the longitudinal direction and are connected to a fixing device at the proximal end of the device and extend to different distances from the proximal end (see figures). Also, it is well known in the art to include braking or locking devices to hold the position of the pushing/pulling elements in the fixing device in order to fix the angular position of the shaft. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to include a locking mechanism in the fixing device of Danieli in order to fix the angular position of the shaft during a procedure.

Art Unit: 3739

5. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Danieli (USPN 4873965) as applied to claims 1 and 2 above, and further in view of Takahashi et al. (USPN 5752912).

6. Referring to claim 3, Danieli teaches all of the limitations of this claim as described above except for the pushing/pulling elements being ropes. Takahashi et al. teach a similar device in which the pushing/pulling elements are ropes. It would have been obvious to one of ordinary skill in the art at the time of invention that the device of Danieli could have used ropes for pushing/pulling elements as in Takahashi et al. in order to increase the strength of the elements.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth G Schopfer whose telephone number is 703-305-2649. The examiner can normally be reached on M-F (8:00-5:30) First Friday Off.
